Continuation of 11. does NOT place the application in condition for allowance because: The applicant argued about features wherein the indoor system server 24 is not involved at all other than to receive a message indicating that the handover is complete. Further, there is no indication that the subscriber device 12 even transmits the HandoverRequestAck to the server, which was originally transmitted from indoor system server 24 to the MSC 26. Therefore, the applied art does not teach or suggest the access network controller being adapted to setup the communication path as claimed; read on Gallagher in view of Monin as follows;

Gallagher discloses that the mobile switching center (MSC) transmits a handover request to the indoor system server; the indoor system server acknowledging the hand over request by sending back Handover Request ACK signal to MSC, the mobile switching center (MSC) issuing a handover command to the subscriber device and the subscriber device notifying the indoor system server that the handover is complete (therefore a communication path is set up) as discussed in Para 0127-0128 and exhibited in Figs. 1, 2, 14. Thus Gallagher shows the above mentioned limitations.

Concerning Monin providing no insights into the possible interactions between a licensed (public mobile) network and unlicensed (e.g., WLAN) network, the Examiner respectfully points out that Monin is not relied upon for interactions between a licensed (public mobile) network and unlicensed (e.g., WLAN) network. Further, Monin discloses the same identity being used for handover between a plurality of access points (therefore the common identifier). Monin discloses the control unit managing the function of assigning the identity to access points and the handover procedure between access points using the common identity as disclosed in Para 0066, 0069, Fig. 1.

Concerning the applicant's arguments about combination of references, both of the references are from the same field, i.e., communication systems and concerned analogous topics. Therefore, the examiner contends that the features would be combinable to one skilled in art.

Concerning the applicant arguments about motivation to combine the references, the motivation to combine was shown in the secondary reference, Monin.

Therefore, the argued limitations read upon the cited references or are written broad such that they read upon the cited references as shown in the final rejection. .
